Mobile Application Development (iPhone, Android and BlackBerry) When it comes to Mobile Application Programming, it requires highly experienced Mobile Application Developers. At Webadham Solutions, we have a small team of iPhone developers and Android developers. Our mobile application programmers can serve you with any kind of mobile application development, starting from business application to game developments.

Types of app that we develop

- Business apps

- Utility apps

- Entertainment apps

- Productivity apps

- Children apps

Customized application software development

We also provide service for customized application software development. It may be a company just starting up or a well established company; sometimes they require tailor made software to manage their business in a better way. We have a proficient team of software developers who can analyze any kind of business requirement and convert into application software.

User Interactive application development using Flash or Flex Sometimes businesses require user interactive applications such as Company Portfolio, Audio Visual Presentation, Audio Video Conferencing and etc. This type of applications requires animation as well as programming. We are specialized in such application development and have a great team of Flash and Flex application developers to develop such kind of user interactive application software for the businesses.

Our Website designing, Applications, Software development Strategy While working on a project we go through the following phases and steps as a perfect planning is always required to complete a project on time as well as to manage it properly. This development guideline may however change in case of a special project.

Following are our development phases

1. Starting the Project

a) Requirement Analysis

Based on the information provided by you try to get a clean idea about your business and what are trying to acquire using the proposed project. Indeed we need a complete and as detailed as possible information to analysis your requirement and have a complete understanding about your business, logic and especially business volume. So try to provide us with as much as information possible.

b) Questioners

In some cases the client does not have a complete understanding of technology and may have technical / non technical questions on his/her project development. Also during analysis of your requirement we may have questions. So in this stage both the parties answer each other questions and clarify things.

c) Functional Specification

If we find that the client can have benefits using our services and we are able to fulfil client's requirement within his/her budget, then we go ahead and create a full specification document along with quotation. Budget is very important to us to estimate the project properly. There are multiple ways / standard doing a project. Project can be developed in a cheaper way and also by using high end technologies and in big scale putting more money. So we try to prepare the quote according to the client's budget.

d) Contract

Upon coming on an agreement on project's functional spec, timeline and cost, we'll prepare a contract document which should be signed and submitted to us with the Initial Deposit Payment (**40% of total project cost**). Once we receive the money and signed contract we provide a fully executed contract document along with the receipt of your initial payment and allocate developers' timeslot and schedule your project.

2. Domain and Hosting

If you are not aware about domain name or hosting or if you are not sure which server and hosting to acquire, in that case we can provide you with domain registration and hosting service.

3. Graphics Designing

a) Understanding your choice and likings

We shall ask you for the colour combinations of your choice and if you have any idea about of the Wireframe (block structure) to be used. You may also refer other websites / templates that you like.

b) Designing a unique layout

After understanding your view, choice of colours and block layout (if any), our designer starts designing a layout based on the information and functionalities of the project. This information should be provided to us before the scheduled commencing date.

c) Design review and finalization

After our designer comes up with a layout, we'll forward the layout to you for your review. You may have some alteration requests; in that case we shall change the things as per your request and send it to you again for review. Once you finalize the design, we proceed to next stage. If you delay responding to our emails during design finalization, your project dead line will be delayed accordingly. So it's highly desired that you keep in continuous touch with us during this phase.

4. Programming

a. Database development (Optional Phase in case your project is a database driven website) We do develop the database architecture for the project. In case of you are well versed with RDBMS then you may request us to show you the database architecture before we proceed. If you want to review the database architecture, then it should be very quick so that we don't have to wait more than two days for your review, otherwise the project will be delayed.

b. Creation of pages and paring the required HTML / CSS / JavaScript Our HTML / CSS developer starts creating the required pages from the finalized layout design using HTML / CSS and JavaScript and forward each page to the programmers. Images and content should be provided by you in this stage. It would be ideal if you can provide images and text in the beginning.

c. Coding (Optional Phase, in case your project is not a static website) Programmers receive the HTML / CSS from the designer and perform coding on it. While a particular module is completed you may review that module from our staging (testing) server. If you find any BUG during this phase, then you keep the information with you and provide us the information during debugging and testing phase.

5. Testing and Debugging

a. Testing of functionality

We test the project for uninterrupted functionality on our staging server. You may also co-operate with us with testing and forward us your findings (bugs).

b. Testing of browser compatibility

We shall test the website on all the major browsers named

• Mozilla 3.5 and above • IE 9 and 10 and above

• Chrome Browser

• Safari Browser

6. Beta Launch

a. Payment

Second installment of 40% of the total amount should be paid before we take the website live on your domain. We shall send you the invoice for the 40% of the total project cost and you should execute the invoice as soon as possible.

b. Taking the website LIVE

We'll provide FREE support of another 30 days after the final payment. During this 45 days we'll be fixing any error / bug comes (that was not found during STAGING testing or BETA testing) out for FREE of cost.

7. Support

a. Beta Support

We'll provide you 30 days of post production support while the site is in BETA mode. You should complete the beta testing within 30 days and pay us the rest 20% of the total project amount. After receiving the money we shall send you the receipt of the final payment.

b. Live Support

We'll provide FREE support of another 30 days after the final payment. During this 30 days we'll be fixing any error / bug comes (that was not found during STAGING testing or BETA testing) out for FREE of cost.

8. Maintenance

If you like us to maintain your project (that includes, bug fixing, database maintenance, log clearance, trouble shooting) then we'll provide you a monthly / yearly maintenance cost depending on the size / complexity / volume of your project. A maintenance contract will be created separately at the end of the project.

1. Domain Registration (different prices for different extension).

2. Web Hosting: We are selling hosting in 2 ways (For Both 'Windows' & 'Linux' Platform): Yearly .

3. Website Maintenance: Custom Price.

4. Web portal Updates: Custom Price.

5. about Payment Information:

The total project (Min.): 7 static page website   (Excluding Service Tax and SEO).

Initial amount at time of order is 30% of estimated project cost should be paid in advance and remaining balance amount should be paid after completion and hosting of website.
